Education

Florida State University — Tallahassee, FL
Bachelor of Science in Computer Science — *Expected May 2027*

Tallahassee State College — Tallahassee, FL
Associate of Arts — *May 2022 – May 2024*

Technical Skills

IT & Security: Active Directory, Windows Server, Help Desk Ticketing, Vulnerability Scanning, DoD STIGs, Patch Management, Tanium, Forescout, BitLocker, Windows 11
Networking: TCP/IP, DNS, DHCP, Network Switches, Port Activations, SecureCRT, Apstra
Microsoft & Admin Tools: SharePoint, Power Apps, Power BI, Excel
Languages: Python, SQL, JavaScript, HTML/CSS, C/C++, Java

Experience

PCIP Air Force Civilian Services — May 2026 – Aug. 2026
IT Trainee (Internship) — *Rapid City, SD*

- Conducted vulnerability scans and applied DoD STIG security controls across 6+ work-center systems, remediating 20+ findings
- Supported vulnerability and patch management by shadowing privileged administrators using Tanium to deploy Windows 11 24H2 updates across managed endpoints
- Assisted Client Systems Technicians (CSTs) with reimaging and quarantining government-furnished equipment (GFEs), verifying BitLocker encryption and software compliance before devices were returned to service
- Performed enterprise IT operations including Windows Server maintenance, Active Directory account management, shared-drive permissions, network switches, UPS systems, and port activations
- Gained exposure to DoD Comply-to-Connect (C2C) access control using Forescout, Apstra, and SecureCRT

High Performance Materials Institute — May 2025 – Aug. 2025
Undergraduate Research Assistant — *Tallahassee, FL*

- Built a Python, FastAPI, and OctoPrint latency-testing system for a robotic 3D-printing arm, measuring command response times with 0.1-second precision
- Integrated custom G-code commands into the control pipeline and synchronized them with motion-tracker data, improving position-capture precision by 25%
- Analyzed 100+ latency data points to identify performance bottlenecks, reducing average command response delay by 18% through targeted firmware and OS optimizations

Projects

PCIP Intern Portal | *Power Apps, Power BI, SharePoint, JSON* — May 2026 – Aug. 2026

- Built a centralized PCIP onboarding portal in SharePoint that provided future interns with training materials, program contacts, schedules, FAQs, and required documents
- Created Power Apps forms for intern check-ins, document submissions, task updates, and feedback collection
- Connected SharePoint data to Power BI dashboards to visualize onboarding progress, task completion, and portal engagement

Weather Analytics Dashboard | *Python, Django, Pandas, Open-Meteo API, Chart.js* — Jan. 2026 – May 2026

- Developed a full-stack weather analytics web application using Python and Django featuring CRUD functionality for managing historical and real-time weather records
- Integrated the Open-Meteo API with a custom Django management command to automatically retrieve, process, and store weather data using Django's ORM
- Built an interactive analytics dashboard using Pandas and Chart.js to visualize weather trends, summary statistics, and comparisons across collected datasets
